

Turning Data Investment Into Data Capability

We bridge the gap between data strategy and data reality.

WHO WE ARE

Most organisations have invested heavily in data strategy and data technology. Few have closed the gap between the two. **Strategy without execution stays on a shelf. Technology without operationalisation goes underused.** Nephos is the enabler that bridges that gap, taking what organisations have planned and purchased and transforming it into a data capability they can actually use. Whether that means building the capability from the ground up, running it on their behalf, or unlocking the value of platforms they have already invested in, we meet the customer where they are and build from there.

I have not met anyone yet that's had an IT programme up and running in 12 weeks. My advice would always be to work with Nephos. You'll deliver quicker and have some great support sitting behind it."

Garry Manser

Head of Data Governance, Vanquis Bank

WHAT WE DO

ASSESS AND DESIGN

Data Management Assessment

A structured, benchmarked diagnostic of data management maturity across people, process and technology, giving leaders the evidence they need to act with confidence.

Use Case Design

A pragmatic design phase that translates business drivers into a clearly defined data management use case, producing a blueprint delivery teams can build from.

BUILD AND ACTIVATE

Use Case Execution

Turning designed use cases into operational reality through embedded processes, configured workflows and active discovery, reporting and remediation.

Technology Activation

Aligning existing data management and scanning tools to the operating model — ensuring outputs are accurate, usable and connected to the governance processes that depend on them.

RUN AND IMPROVE

Operate

Ongoing expert operation of your data management capability, accelerating time to value through proven processes while keeping governance active as the organisation evolves.

Optimise

Continuous optimisation of existing data management services to improve efficiency, accuracy and alignment as regulatory expectations, business priorities and conditions change.

WHY NEPHOS

Practitioners, not generalists

Hands-on experience from complex, regulated environments; faster diagnosis, sharper insight.

Designed for delivery

Every output translates directly into action; no shelfware, no theoretical recommendations.

Connected end to end

Services designed to connect from assessment through to operation without loss of fidelity.

Built for every level

Outputs that give delivery teams clear direction and executives the visibility they need.
